

Q. What is coronavirus and COVID-19?

Coronavirus is a type of virus that causes respiratory illness — an infection of the airways and lungs. COVID-19 is a new strain of coronavirus. It's part of the same family of coronaviruses that includes the common cold.

Q. How does the virus spread?

Right now, medical experts think that COVID-19 spreads from person-to-person through a cough, sneeze, or kiss. However, since COVID-19 is a new disease, scientists around the globe are racing to learn more about it.

Q. What are the symptoms?

The most common early symptoms appear between 2 and 14 days after being infected. Symptoms can be mild to severe. They include fever, cough, and shortness of breath.

Q. How to prevent infection

The best way to prevent infection is to avoid being exposed to the virus that causes COVID-19. Check the CDC website for up-to-date information. If traveling, visit the CDC travel page for most current travel guidelines.

Good health habits can also help prevent and fight COVID-19.

Wash hands often with soap and water for at least 20 seconds. Especially after going to the bathroom, before eating, and after blowing your nose, coughing, or sneezing.

Q. Are facemasks necessary?

It's best to follow the CDC's recommendations for using a facemask.

If someone is not sick, the CDC does not recommend wearing a facemask for protection from respiratory diseases, including COVID-19.

If someone is having symptoms of COVID-19, they should wear a facemask to help prevent spreading the disease to others.

If someone is a health care worker or is taking care of someone who has COVID-19, they should wear a facemask for protection when in close contact with a person who is sick with COVID-19 or is being evaluated.

Q. What if symptoms are present?

Individuals should call their doctor if they develop a fever, have a cough, or have difficulty breathing. And let them know if they've been in close contact with a person who has COVID-19, or if they live in or have recently traveled to an area where the virus has spread. If they think they are infected, using telehealth helps to prevent spreading a virus.

Q. Are there any prescription drugs that can be used to treat COVID-19?

Right now, there are no prescription drugs that are approved to treat this virus. Scientists are working quickly to develop treatment, so we are closely monitoring CDC and World Health Organization (WHO) guidance for updates on the best treatments.

Q. Are there any vaccines available to prevent COVID-19?

Not yet. Several vaccines are being tested, but they're still in the very early stages of development. After that, they'll need to go through clinical trials to be sure they are both safe and effective before they'd be ready for the public.

Q. What will Anthem member benefits cover for services related to COVID-19 testing and care?

Anthem plans will cover the care members get if they're diagnosed as having COVID-19. For those who have fully insured, Individual, Medicare, and Medicaid plans, it'll also waive their out-of-pocket expenses for the focused test used to diagnose COVID-19. Members can call the number on their ID card to confirm coverage.

Members will pay any other out-of-pocket expenses the plan requires related to COVID-19, unless otherwise determined by state law or regulation.

Q. How much will a COVID-19 test cost?

It shouldn't cost a member anything if they receive a test from the Centers for Disease Control or if they have a fully insured, Individual, Medicare, or Medicaid plan. Members can call the number on their ID card to confirm coverage.

Q. Could there be a shortage of medications people take? If so, what would they do?

Because many drugs we rely on every day are made in China, we are constantly checking the supply of medications available to our members. If we see there could be a shortage of a certain drug, we'll find alternate medications that our members could take for about the same price.

Q. What can people do to make sure they have the drugs they need?

Our members can get a 90-day supply of their maintenance medications through home delivery pharmacy, as well as select retail pharmacies. See the next question about the 90-day supply for more details

Q. Can my employees get a 90-day supply of their medication?

Yes. This is a great time to think about changing from a 30-day supply to a 90-day supply of any prescription medicines they take on a regular basis. If your employees don't have a prescription for a 90-day supply, they can talk to their doctor to see if a 90-day supply would work for them. They can even get a 90-day supply through home delivery pharmacy. If your employees have specific questions about the medicine they take, they should call the pharmacy services number on their member ID card.

Q. If there's an epidemic, how will you ensure that the doctors in the Anthem plan can still provide care?

Anthem is committed to making sure your employees can get the care they need. We're working closely with the doctors and other health care professionals in our plans to prepare for more calls and visits. If your employees' doctors aren't available for some reason, we'll help them find alternate care. Employees can go to [anthem.com/ca](https://www.anthem.com/ca) or call the Member Services number on their ID card.

They should call their doctor if they develop a fever, have a cough, or have difficulty breathing. And let the doctor know if they've been in close contact with a person known to have COVID-19, or if they live in or have recently traveled to an area where the virus has spread. If they think they're infected, using telehealth helps to prevent spreading a virus.

Q. Are there any prescription drugs that can be used to treat COVID-19?

Right now, there are no prescription drugs that are approved to treat this virus. Scientists are working quickly to develop treatment, so we are closely monitoring CDC and World Health Organization (WHO) guidance for updates on the

best treatments.

Q. Are there any vaccines available to prevent COVID-19?

Not yet. Several vaccines are being tested, but they're still in the very early stages of development. After that, they'll need to go through clinical trials to be sure they are both safe and effective before they'd be ready for the public.

Q. What is Anthem doing to prepare?

Anthem is monitoring COVID-19 developments and what they mean for our associates and those we serve. We are fielding questions about the outbreak from our customers, members, providers, and associates. Additionally, our clinical team is actively monitoring external queries and reports from the Centers for Disease Control and Prevention to help us determine what, if any, action is necessary on our part to further support our stakeholders. Anthem has a business continuity plan for serious communicable disease outbreaks, inclusive of pandemics, and will be ready to deploy the plan if necessary.

Q. Does Anthem have a business continuity plan in the event of a pandemic?

Anthem maintains a comprehensive enterprise-wide business continuity program that aligns business requirements of our operating units and related support areas to help us meet our commitments following an “unplanned event.”

This plan includes strategies for a “People Unavailable” event, including a pandemic, to help us continue critical business processes to meet our customer commitments.

Response to and mitigation of such an event can include leveraging our broad geographic footprint, work from home capability, increased personal hygiene and additional building hygiene measures and frequency, travel restrictions, isolation of personnel, and limiting access to and travel between our facilities.

All of this is documented in established policies and procedures to support crisis response measures, such as during a pandemic threat.

Q. Is Anthem encouraging broader use of telehealth assuming the virus spreads?

We are recommending members use telehealth when they can, as it prevents them from spreading a virus and can help protect them from getting a virus while waiting with others at a physical facility.

For more information, check the **CDC website** for up-to-date details and recommendations about COVID-19.
